| 3.0            | 9 July 2026               | Enhanced LP/LG formatting and added CLSSYB visual learning aids             | Tertiary Infotech Academy Pte Ltd |

## TABLE OF CONTENTS

### [Update table of contents](#)

Right-click and choose Update Field, or press F9, to build the table of contents.

# Welcome

Welcome! This guide takes you step-by-step through every hands-on lab in the WSQ course Certified Lean Six Sigma Yellow Belt (CLSSYB) Training (Course Code: TGS-2025053922). You will build one continuous improvement package for the Contoso Service Desk case study, moving from Yellow Belt role clarity to control planning, A3 handover and certification readiness.

## Course flow at a glance

Day 1 builds the improvement package from Yellow Belt role, VOC and SIPOC through PDCA, DMAIC Define, measurement, analysis, root cause and countermeasures. Day 2 completes control planning, A3 handover, review and assessment readiness.

## CLSSYB Learning Roadmap

The labs build one improvement package from role clarity to control readiness.

Course roadmap: each lab adds one piece to the final Yellow Belt improvement package.

## How to Use This Guide

- Complete the labs in order because each lab adds to the same improvement package.
- For each lab, read the objective and scenario before completing the step-by-step tasks.
- Submit the stated deliverables and use the checkpoint questions to test understanding.

## Lab Index

| Lab | Primary skill                  | Title                                                           |
|-----|--------------------------------|-----------------------------------------------------------------|
| 1   | Yellow Belt role and readiness | Yellow Belt Role, Certification Paths, and Improvement Scenario |
| 2   | Lean Six Sigma foundations     | Lean, Six Sigma, Waste, Voice of Customer, and Value            |
| 3   | SIPOC and process mapping      | SIPOC, Process Mapping, Handoffs, and Yellow Belt SME Support   |

|    |                                     |                                                                  |
|----|-------------------------------------|------------------------------------------------------------------|
| 4  | PDCA project charter                | PDCA Small Improvement Project Charter                           |
| 5  | DMAIC Define support                | DMAIC Overview, Problem Statement, Scope, and Stakeholders       |
| 6  | Measurement planning                | Data Collection, KPIs, Check Sheets, and Basic Metrics           |
| 7  | Basic analysis and variation        | Pareto, Run Charts, Variation, Yield, DPU, and DPMO              |
| 8  | Root cause support                  | Root Cause Analysis with 5 Whys, Fishbone, and Evidence          |
| 9  | Improve tools and kaizen            | Countermeasures, 5S, Mistake Proofing, Standard Work, and Kaizen |
| 10 | Control and certification readiness | Control Plan, A3 Summary, Handover, and Certification Readiness  |

## Lab 1: Yellow Belt Role, Certification Paths, and Improvement Scenario

| Field           | Details                                                |
|-----------------|--------------------------------------------------------|
| Primary skill   | Yellow Belt role and readiness                         |
| Source lab file | labs/lab-01-yellow-belt-role-certification-scenario.md |

### Objective

Explain the Lean Six Sigma Yellow Belt role, compare certification path expectations, and choose a simple improvement scenario.

### Scenario

Contoso Service Desk wants to reduce delays in assigning support tickets. You are not leading a major Green Belt project, but you are supporting the team by mapping the process, gathering data, and testing a small PDCA improvement.

#### What you will produce

Submit role table, certification path comparison, selected scenario, and readiness checklist.

### Step-by-Step Lab Guide

#### Step 1 - Define the Yellow Belt role

| Responsibility | Yellow Belt contribution |
|----------------|--------------------------|
|----------------|--------------------------|

Complete the blank cells with your own analysis before moving to the next step.

#### Step 2 - Compare certification pathways

| Path                        | Best for | Preparation need |
|-----------------------------|----------|------------------|
| Standard comprehensive exam |          |                  |
| Self-paced chapter exams    |          |                  |

Complete the blank cells with your own analysis before moving to the next step.

### Step 3 - Select improvement scenario

Choose one:

- Contoso Service Desk ticket assignment delay
- Real workplace process approved by trainer

Write:

- Process name
- Customer
- Pain point
- Expected benefit
- Data available

### Step 4 - Create readiness checklist

| Topic | Current confidence 1-5 | Study action |
|-------|------------------------|--------------|
|-------|------------------------|--------------|

Complete the blank cells with your own analysis before moving to the next step.

### Deliverable

Submit role table, certification path comparison, selected scenario, and readiness checklist.

### Checkpoint Questions

1. Why does a Yellow Belt usually support rather than lead major projects?
2. Why is process mapping an important Yellow Belt contribution?
3. What makes your chosen scenario suitable for a small improvement?

## Lab 2: Lean, Six Sigma, Waste, Voice of Customer, and Value

| Field           | Details                                       |
|-----------------|-----------------------------------------------|
| Primary skill   | Lean Six Sigma foundations                    |
| Source lab file | labs/lab-02-lean-six-sigma-waste-voc-value.md |

### Objective

Identify customer value, voice of customer, waste, defects, and variation in a simple process.

### Scenario

Employees complain that IT support tickets are slow and status updates are unclear. The team needs to understand what customers value before choosing improvements.

### CLSSYB Learning Roadmap

The labs build one improvement package from role clarity to control readiness.

*The CLSSYB labs build one continuous improvement package.*

### What you will produce

Submit VOC table, value-added table, waste walk table, and defect/variation notes.

### Step-by-Step Lab Guide

#### Step 1 - Capture voice of customer

| Customer statement | Need | CTQ requirement |
|--------------------|------|-----------------|
|--------------------|------|-----------------|

Complete the blank cells with your own analysis before moving to the next step.

### Step 2 - Identify value-added work

| Activity | Value-added, business-value, or non-value-added | Reason |
|----------|-------------------------------------------------|--------|
|----------|-------------------------------------------------|--------|

Complete the blank cells with your own analysis before moving to the next step.

### Step 3 - Conduct a waste walk

Find examples of the eight wastes:

- Defects
- Overproduction
- Waiting
- Non-utilized talent
- Transportation
- Inventory
- Motion
- Extra processing

### Step 4 - Connect Six Sigma to defects and variation

Define:

- What is a defect in this process?
- What is an opportunity for defect?
- What variation is visible?
- What data would prove the issue?

### Deliverable

Submit VOC table, value-added table, waste walk table, and defect/variation notes.

### Checkpoint Questions

4. What is the difference between waste and a defect?
5. Why should customer needs be translated into CTQs?
6. Which waste appears most often in your scenario?

## Lab 3: SIPOC, Process Mapping, Handoffs, and Yellow Belt SME Support

| Field           | Details                                   |
|-----------------|-------------------------------------------|
| Primary skill   | SIPOC and process mapping                 |
| Source lab file | labs/lab-03-sipoc-process-map-handoffs.md |

### Objective

Create a SIPOC and process map that helps an improvement team understand boundaries, handoffs, inputs, outputs, and customers.

### Scenario

The service desk manager asks you to map the ticket assignment process so a Green Belt can decide whether a larger DMAIC project is needed.

#### SIPOC Process View

Use SIPOC to agree the process boundary before improving it.

*SIPOC clarifies the process boundary before detailed mapping.*

#### What you will produce

Submit SIPOC, detailed process map, pain point notes, and SME notes.

## Step-by-Step Lab Guide

### Step 1 - Build SIPOC

| Suppliers | Inputs | Process | Outputs | Customers |
|-----------|--------|---------|---------|-----------|
|-----------|--------|---------|---------|-----------|

Complete the blank cells with your own analysis before moving to the next step.

### Step 2 - Create detailed process map

| Step | Actor | Activity | System | Handoff |
|------|-------|----------|--------|---------|
|------|-------|----------|--------|---------|

Complete the blank cells with your own analysis before moving to the next step.

### Step 3 - Mark pain points

On the process map, identify:

- Waiting points
- Rework loops
- Missing decision rules
- Duplicate entry
- Unclear ownership

### Step 4 - Prepare SME notes

Write notes a Yellow Belt SME would bring to a project team:

- What actually happens
- Where work gets stuck
- Which rules are informal
- Which data fields are unreliable
- Which people should be interviewed

## Deliverable

Submit SIPOC, detailed process map, pain point notes, and SME notes.

## Checkpoint Questions

7. Why is SIPOC useful before detailed mapping?
8. What is a handoff risk?
9. How can a Yellow Belt help a project leader without owning the whole project?

## Lab 4: PDCA Small Improvement Project Charter

| Field           | Details                                       |
|-----------------|-----------------------------------------------|
| Primary skill   | PDCA project charter                          |
| Source lab file | labs/lab-04-pdca-small-improvement-charter.md |

### Objective

Create a PDCA charter for a small improvement that a Yellow Belt could support or run under guidance.

### Scenario

The service desk wants to test whether a new ticket triage checklist reduces assignment delay within two weeks.

#### PDCA Improvement Loop

Plan a small change, test it, learn from results and standardise the gain.

*PDCA keeps the small improvement test controlled and reversible.*

#### What you will produce

Submit PDCA table, problem statement, goal statement, scope, risk table, and test plan.

### Step-by-Step Lab Guide

#### Step 1 - Define PDCA cycle

| PDCA phase | Action for this scenario |
|------------|--------------------------|
|------------|--------------------------|

|       |  |
|-------|--|
| Plan  |  |
| Do    |  |
| Check |  |
| Act   |  |

Complete the blank cells with your own analysis before moving to the next step.

## Step 2 - Write problem and goal statements

Use this format:

`text

Problem: From <date range>, <process> experienced <measurable issue>, causing <customer/business impact>.

Goal: Reduce/increase <metric> from <baseline> to <target> by <date>.

## Step 3 - Define scope

|          |              |
|----------|--------------|
| In scope | Out of scope |
|----------|--------------|

Complete the blank cells with your own analysis before moving to the next step.

## Step 4 - Identify risks and assumptions

|                    |        |          |
|--------------------|--------|----------|
| Risk or assumption | Impact | Response |
|--------------------|--------|----------|

Complete the blank cells with your own analysis before moving to the next step.

## Step 5 - Plan the test

Define:

- Test change
- Pilot team
- Start and end date
- Data to collect
- Review meeting
- Decision rule to adopt, adapt, or abandon

## **Deliverable**

Submit PDCA table, problem statement, goal statement, scope, risk table, and test plan.

## **Checkpoint Questions**

10. Why is PDCA suitable for small improvements?
11. What makes a goal statement measurable?
12. What decision will you make after the Check phase?

## Lab 5: DMAIC Overview, Problem Statement, Scope, and Stakeholders

| Field           | Details                                        |
|-----------------|------------------------------------------------|
| Primary skill   | DMAIC Define support                           |
| Source lab file | labs/lab-05-dmaic-define-scope-stakeholders.md |

### Objective

Support the Define phase of a DMAIC project by clarifying the problem, scope, stakeholders, customers, and expected benefits.

### Scenario

The PDCA pilot shows promise, but management may escalate the issue to a larger DMAIC project. Your Yellow Belt task is to prepare clear Define information.

### DMAIC Yellow Belt Support

Yellow Belts support the project team with process knowledge, data and evidence.

*DMAIC connects Define work to later Measure, Analyze, Improve and Control steps.*

### What you will produce

Submit DMAIC summary, refined problem statement, stakeholder table, project boundaries, and benefit notes.

## Step-by-Step Lab Guide

### Step 1 - Summarize DMAIC

| Phase   | Purpose | Yellow Belt support |
|---------|---------|---------------------|
| Define  |         |                     |
| Measure |         |                     |
| Analyze |         |                     |
| Improve |         |                     |
| Control |         |                     |

Complete the blank cells with your own analysis before moving to the next step.

### Step 2 - Refine problem statement

Check that your statement includes:

- Process
- Time period
- Measurable problem
- Impact
- No assumed root cause
- No assumed solution

### Step 3 - Identify stakeholders

| Stakeholder | Role | Interest | Communication need |
|-------------|------|----------|--------------------|
|-------------|------|----------|--------------------|

Complete the blank cells with your own analysis before moving to the next step.

### Step 4 - Define project boundaries

Document:

- Start point
- End point
- Included departments
- Excluded departments
- Key assumptions

## **Step 5 - Estimate benefit**

Create benefit notes for:

- Time saved
- Defects reduced
- Waiting reduced
- Customer satisfaction improved
- Staff frustration reduced

## **Deliverable**

Submit DMAIC summary, refined problem statement, stakeholder table, project boundaries, and benefit notes.

## **Checkpoint Questions**

13. Why should a problem statement avoid naming a solution?
14. Which DMAIC phases can a Yellow Belt support strongly?
15. Who must be involved before scope is finalized?

## Lab 6: Data Collection, KPIs, Check Sheets, and Basic Metrics

| Field           | Details                                          |
|-----------------|--------------------------------------------------|
| Primary skill   | Measurement planning                             |
| Source lab file | labs/lab-06-data-collection-kpis-check-sheets.md |

### Objective

Create a data collection plan with KPIs, operational definitions, check sheets, and basic metric calculations.

### Scenario

The service desk team has anecdotal complaints, but improvement decisions need data. You will design a simple measurement plan.

### Measure and Analyze

Good Yellow Belt analysis connects data collection to the problem statement.

*Measurement choices should support analysis, not just reporting.*

### What you will produce

Submit KPI table, check sheet, defect categories, sampling plan, and basic metric calculations.

### Step-by-Step Lab Guide

#### Step 1 - Define KPIs

| KPI | Operational definition | Data source | Frequency |
|-----|------------------------|-------------|-----------|
|-----|------------------------|-------------|-----------|

Complete the blank cells with your own analysis before moving to the next step.

## **Step 2 - Create a check sheet**

Design a check sheet with:

- Date
- Ticket ID
- Ticket type
- Assignment time
- Defect category
- Rework required
- Notes

## **Step 3 - Define defect categories**

Create categories:

- Missing information
- Wrong queue
- Delayed assignment
- Duplicate ticket
- Reopened ticket
- Unclear status

## **Step 4 - Plan sampling**

Document:

- Sample size
- Collection period
- Who records data
- How data is checked
- What bias might occur

## **Step 5 - Calculate basic metrics**

Use sample values to calculate:

- Total tickets
- Defect count
- Defect rate
- Average assignment time
- Range of assignment time

## **Deliverable**

Submit KPI table, check sheet, defect categories, sampling plan, and basic metric calculations.

### Checkpoint Questions

16. Why does an operational definition matter?
17. What bias could affect your data?
18. Which KPI best reflects the customer pain point?

## Lab 7: Pareto, Run Charts, Variation, Yield, DPU, and DPMO

| Field           | Details                                         |
|-----------------|-------------------------------------------------|
| Primary skill   | Basic analysis and variation                    |
| Source lab file | labs/lab-07-pareto-run-chart-variation-yield.md |

### Objective

Analyze simple process data using Pareto charts, run charts, variation concepts, yield, DPU, and DPMO.

### Scenario

You collected two weeks of service desk data. The team wants to know which defect category matters most and whether assignment time is improving.

### Measure and Analyze

Good Yellow Belt analysis connects data collection to the problem statement.

*Pareto, run chart and yield metrics turn raw counts into improvement evidence.*

### What you will produce

Submit Pareto table, chart screenshot or notes, run chart, metric calculations, and interpretation notes.

## Step-by-Step Lab Guide

### Step 1 - Build Pareto table

| Defect category | Count | Percent | Cumulative percent |
|-----------------|-------|---------|--------------------|
|-----------------|-------|---------|--------------------|

Complete the blank cells with your own analysis before moving to the next step.

### Step 2 - Create Pareto chart

Using spreadsheet software:

1. Enter defect categories and counts.
2. Sort descending.
3. Add cumulative percent.
4. Create bar chart for counts.
5. Add cumulative percent line if your tool supports it.

### Step 3 - Create run chart

Create a run chart of daily average assignment time.

Record:

- Baseline average
- Highest point
- Lowest point
- Direction of trend
- Any unusual point

### Step 4 - Calculate yield, DPU, and DPMO

Use:

`text

Yield = Good Units / Total Units

DPU = Defects / Units

DPMO = (Defects / (Units \* Opportunities per Unit)) \* 1000000

### Step 5 - Interpret variation

Write notes:

- What variation is normal?
- What variation needs investigation?
- What data is missing?
- What conclusion should not be made yet?

## Deliverable

Submit Pareto table, chart screenshot or notes, run chart, metric calculations, and interpretation notes.

## Checkpoint Questions

19. What does a Pareto chart help prioritize?
20. What does a run chart show over time?
21. Why should you avoid overreacting to one data point?

## Lab 8: Root Cause Analysis with 5 Whys, Fishbone, and Evidence

| Field           | Details                                   |
|-----------------|-------------------------------------------|
| Primary skill   | Root cause support                        |
| Source lab file | labs/lab-08-root-cause-5-whys-fishbone.md |

### Objective

Support root cause analysis using 5 Whys, fishbone diagram categories, and evidence checks.

### Scenario

Pareto analysis shows delayed assignment is the largest defect category. The team asks you to help identify possible causes.

Root cause analysis links symptoms to evidence before countermeasures are chosen.

**What you will produce**  
Submit problem statement, 5 Whys table, fishbone diagram, cause priority table, and validation plan.

### Step-by-Step Lab Guide

#### Step 1 - Write the problem

Use one focused problem:  
`text`

Ticket assignment is delayed for <percentage> of tickets during <period>, causing <impact>.

## Step 2 - Complete 5 Whys

| Why level | Answer | Evidence needed |
|-----------|--------|-----------------|
|-----------|--------|-----------------|

Complete the blank cells with your own analysis before moving to the next step.

## Step 3 - Create fishbone diagram

Use categories:

- People
- Process
- Policy
- Technology
- Measurement
- Environment

Add possible causes under each.

## Step 4 - Prioritize likely causes

| Possible cause | Evidence available | Confidence high/medium/low |
|----------------|--------------------|----------------------------|
|----------------|--------------------|----------------------------|

Complete the blank cells with your own analysis before moving to the next step.

## Step 5 - Validate before solution

Write what data, observation, interview, or test would confirm each likely cause.

## Deliverable

Submit problem statement, 5 Whys table, fishbone diagram, cause priority table, and validation plan.

## Checkpoint Questions

22. Why should root cause analysis use evidence?
23. What makes a cause actionable?
24. Why should the team avoid jumping straight to solutions?

## Lab 9: Countermeasures, 5S, Mistake Proofing, Standard Work, and Kaizen

| Field           | Details                                                  |
|-----------------|----------------------------------------------------------|
| Primary skill   | Improve tools and kaizen                                 |
| Source lab file | labs/lab-09-countermeasures-5s-pokayoke-standard-work.md |

### Objective

Select practical countermeasures using 5S, mistake proofing, visual management, standard work, and Kaizen planning.

### Scenario

Root cause analysis suggests delayed assignments happen because ticket categories are inconsistent and required information is missing. The team wants low-risk countermeasures.

#### Root Cause to Countermeasure

Evidence should connect every proposed fix to an observed cause.

*Countermeasures should address confirmed causes rather than symptoms.*

#### What you will produce

Submit countermeasure table, priority scoring, 5S table, mistake-proofing design, and standard work checklist.

## Step-by-Step Lab Guide

### Step 1 - Generate countermeasures

| Root cause | Countermeasure | Expected effect |
|------------|----------------|-----------------|
|------------|----------------|-----------------|

Complete the blank cells with your own analysis before moving to the next step.

### Step 2 - Prioritize countermeasures

Score each idea:

- Impact: 1 to 5
- Effort: 1 to 5
- Risk: 1 to 5
- Priority = impact - effort - risk

### Step 3 - Apply 5S thinking

| 5S           | Service desk example |
|--------------|----------------------|
| Sort         |                      |
| Set in order |                      |
| Shine        |                      |
| Standardize  |                      |
| Sustain      |                      |

Complete the blank cells with your own analysis before moving to the next step.

### Step 4 - Design mistake proofing

Choose two mistake-proofing ideas:

- Required fields
- Dropdown categories
- Auto-routing rules
- Warning message
- Checklist before submission

### Step 5 - Create standard work

Write a short standard work checklist for ticket triage with owner, timing, and expected output.

## **Deliverable**

Submit countermeasure table, priority scoring, 5S table, mistake-proofing design, and standard work checklist.

## **Checkpoint Questions**

- 25. What is the difference between a countermeasure and a permanent solution?
- 26. How can 5S apply to digital work?
- 27. Why is standard work important after improvement?

# Lab 10: Control Plan, A3 Summary, Handover, and Certification Readiness

| Field           | Details                                                |
|-----------------|--------------------------------------------------------|
| Primary skill   | Control and certification readiness                    |
| Source lab file | labs/lab-10-control-plan-a3-certification-readiness.md |

## Objective

Create a control plan, A3-style improvement summary, handover checklist, and personal certification readiness plan.

## Scenario

The PDCA test improved assignment time. The team needs a simple control plan so the gain is sustained and management can decide whether to expand the solution.

Control planning and A3 handover sustain the improvement after the lab.

### What you will produce

Submit control plan, visual management notes, A3 summary, handover checklist, and certification readiness plan.

## Step-by-Step Lab Guide

### Step 1 - Create control plan

| Process step | Metric | Target | Owner | Check frequency | Response plan |
|--------------|--------|--------|-------|-----------------|---------------|
|--------------|--------|--------|-------|-----------------|---------------|

Complete the blank cells with your own analysis before moving to the next step.

### Step 2 - Define visual management

Choose simple visuals:

- Weekly run chart
- Defect category Pareto
- Status board
- Checklist compliance count
- Escalation trigger list

### Step 3 - Write A3 summary

Create sections:

1. Background
2. Current condition
3. Goal
4. Analysis
5. Countermeasures
6. Implementation plan
7. Results
8. Follow-up and control

### Step 4 - Prepare handover

Create handover checklist:

- Process owner accepts control plan.
- Standard work is stored.
- KPI report owner is assigned.
- Review cadence is scheduled.
- Open issues are listed.
- Escalation criteria are documented.

### Step 5 - Build certification readiness plan

| Topic | Confidence 1-5 | Evidence from labs | Next review action |
|-------|----------------|--------------------|--------------------|
|-------|----------------|--------------------|--------------------|

Complete the blank cells with your own analysis before moving to the next step.

## **Deliverable**

Submit control plan, visual management notes, A3 summary, handover checklist, and certification readiness plan.

## **Checkpoint Questions**

- 28. Why does an improvement need a control plan?
- 29. What should happen if a metric falls outside target?
- 30. Which Yellow Belt topic needs your most review?
